

# MICHINARI SAKAI

## PERSONAL DATA

---

ADDRESS: 475 Portola Plaza #5-123B, Los Angeles, CA 90095, USA  
PHONE: +1-808-206-4357  
EMAIL: [michsakai@ucla.edu](mailto:michsakai@ucla.edu)

## WORK EXPERIENCE

---

APR. 2016 - <i>Current</i>	Post-doctoral Scholar, University of California, Los Angeles CUORE: Currently working on improving Monte Carlo simulation for background modeling to better understand radioactive contamination in the detector. Also worked on bolometric thermal model and its application to develop simulated data for CUORE as well as other data processing techniques such as thermal gain stabilization of bolometer pulses.
AUG. 2009 - APR. 2016	Research Assistant, University of Hawaii at Manoa KAMLAND: Developed directional reconstruction algorithm for high-energy neutrinos and conducted track reconstruction and particle identification studies in liquid scintillator. First ever physics application (dark matter search) of neutrino directionality in scintillator experiments. MINI-TIMECUBE: Lead GEANT4 simulation developer for project. Examined trade studies for various neutron capture dopants in scintillator. Contributed to neutrino/neutron directional reconstruction algorithm. Conducted background studies for long-lived isotopes produced from cosmogenic muons.
AUG. 2007 - MAY. 2009	Teaching Assistant, University of Hawaii at Manoa Taught two undergraduate physics mechanics laboratory courses per semester. Received positive reviews.
JAN. 2003 - MAR. 2006	Interpreter and Teacher (Mar. 2006) Part time English lecturer for Korean undergraduate students. (Mar. 2004 - Dec. 2005) Part time contributing reporter and translator for campus magazine. (Jul. 2004) Spontaneous trilingual interpreter for W-CARP International Education Conference. (Mar. 2003 - Mar. 2004) Part time translator for magazine Today's World.

## SKILLS

---

Software/Tools:	ROOT, GEANT4, PADS, AUTOCAD
Programming Languages:	C++, Python, Fortran, Perl, Mathematica, Matlab, Bash, VHDL
Human Languages:	English, Japanese, Korean

## EDUCATION

---

- APR. 2016    Ph.D. in PHYSICS, Univ. of Hawaii at Manoa  
Dissertation: High Energy Neutrino Analysis in KamLAND and Application to Dark Matter Search  
GPA: 3.97/4.00  
Advisor: Prof. John G. LEARNED
- AUG. 2005 - AUG. 2006    Graduate Program in MATHEMATICS, Sun Moon Univ., S. Korea  
GPA: 4.50/4.50  
Advisor: Prof. Doe-Wan KIM
- AUG. 2005    Double B.S. in PHYSICS and MATHEMATICS, Sun Moon Univ., S. Korea  
Honors: Summa Cum Laude, GPA: 4.33/4.50  
Advisor: Prof. Ki-Won KIM

## SCHOLARSHIPS AND AWARDS

---

- 2004    Award for Outstanding Academic Achievement, Samsung Corp.
- 2001 - 2004    Undergraduate Achievement Scholarships, Sun Moon Univ.
- 2001    Ae-Guk Freshman Scholarship, Sun Moon Univ.

## PRESENTATIONS AND POSTERS

---

Oct 2017	CUORE AND BACKGROUND REDUCTION CASE STUDIES FOR CUPID, DNP 2017, Pittsburgh, Pennsylvania
May 2017	STATUS OF THE CUORE $0\nu\beta\beta$ DECAY SEARCH, invited talk at the Conference on Science at SURF, South Dakota
Jul 2015	HIGH ENERGY ANALYSIS AND APPLICATION TO DARK MATTER SEARCH IN KAMLAND, talk for DOE review, Honolulu, Hawaii
Jun 2012	INDIRECT DARK-MATTER DETECTION THROUGH KAMLAND, poster at Neutrino 2012, Kyoto, Japan
Nov 2010, 2011	WHAT IS A NEUTRINO?, MINI-TIMECUBE: THE WORLD'S SMALLEST NEUTRINO DETECTOR, talks at Univ. of Hawaii campus open house, Honolulu, Hawaii
Aug 2010	MINI-TIMECUBE: A PORTABLE DIRECTIONAL NEUTRINO DETECTOR talk at AAP 2010, Sendai, Japan
Sep 2009	KAMLAND SUMMARY, talk for DOE review, Honolulu, Hawaii
Jul 2009	STUDENT PRESENTATION: HOW TO SOLVE $\theta_{23}$ DEGENERACY, International Neutrino Summer School, Fermilab

## STATEMENT OF RESEARCH INTERESTS AND EXPERIENCE

---

I have been involved with the CUORE (Cryogenic Underground Observatory for Rare Events) experiment at the University of California, Los Angeles since April of 2016. My main work currently involves development of the Geant4 Monte Carlo simulation to better understand the radio active backgrounds in the detector. The energy spectrum of the backgrounds in the so called alpha region ( $\gtrsim 2.5$  MeV) exhibit peculiar features that can better explain the types of sources and their distributions in various parts and materials of the detector. This can help us to better understand our backgrounds and extrapolate this knowledge to the energy region of interest (2465 keV to 2575 keV) for  $0\nu\beta\beta$  decay of  $^{130}\text{Te}$ . I have also worked on thermal modeling of the detector bolometers and its application toward developing simulated data for CUORE as well as other data processing techniques such as thermal gain stabilization of bolometer signals.

My main interest during my graduate studies has been in directional neutrino reconstruction and its applications such as indirect dark matter searches, directional geo-neutrino measurements, and anti-nuclear proliferation techniques that involve locating the position of the source.

I have been involved with three projects at the University of Hawaii: the 1 kt liquid scintillator neutrino experiment KamLAND (Kamioka Liquid Scintillator Antineutrino Detector) in Japan, a portable 2.2 L plastic scintillator neutrino experiment called the mini-TimeCube, and scintillator R&D for a future 10 kt-scale deep-sea based neutrino detector HanoHano.

My work in KamLAND has involved developing directional event reconstruction methods for high-energy  $\sim\text{GeV}$  scale neutrinos and applying this to conduct an indirect dark matter search by looking at excess neutrinos from the core of the Sun and Earth. Studies done with Monte Carlo suggest that the accuracy of reconstructing the neutrino direction using this method is better than that of water-Cherenkov detectors by  $\sim 10^\circ$  for energies  $\sim 1$  GeV and greater. This method was tested against initial events spilling into KamLAND from the T2K neutrino beam-line and the results were consistent with what was expected. I believe this is the first ever physics application of neutrino directionality in a scintillator experiment.

In addition, I have worked as the lead GEANT4 simulation designer for the mini-TimeCube collaboration to conduct case studies for optimizing the detector design, test candidate neutron capture doping elements in plastic scintillator, and simulate the response of the multi-channel-plate (MCP) PMTs deployed in the detector. These studies were used during construction of the detector, and to develop directional algorithms that are now being tested in analyses of

neutrons from test sources as well as neutrinos from nuclear reactors. I have also conducted simulation studies for cosmic-ray muons and long-lived cosmogenic background isotopes such as  $^8\text{He}$  and  $^9\text{Li}$ . These backgrounds are extremely difficult to tag due to their long life-time ( $>\sim\text{s}$  scale) and travel distances. The studies have been vital to the project. Working with the mini-TimeCube project has further involved designing and fabricating PCB boards as well as contributing to the FPGA firmware for the readout electronics.

Finally, my work in scintillator R&D for HanoHano has been designing and building apparatus using CAD for measuring light output of LAB based liquid scintillators when put in large electric potential gradients as well as testing their light transmissivity under extreme temperatures and pressures such as those found in deep-sea environments.

As a post-doctorate researcher, I am looking for an integrated work environment where I can get hands-on experience with detector hardware, electronics, and firmware development while, at the same time, applying my skills in simulation and analysis.
